Clinically appropriate	29	30	54	39	42	55	22	23	55	90	95	55

Clinically inappropriate patients are those that the consultant does not deem fit for home treatment and those currently on chemotherapy, however the service is being discussed with those on chemotherapy to raise their awareness of the option of home therapy should they wish it once their chemotherapy has ended.

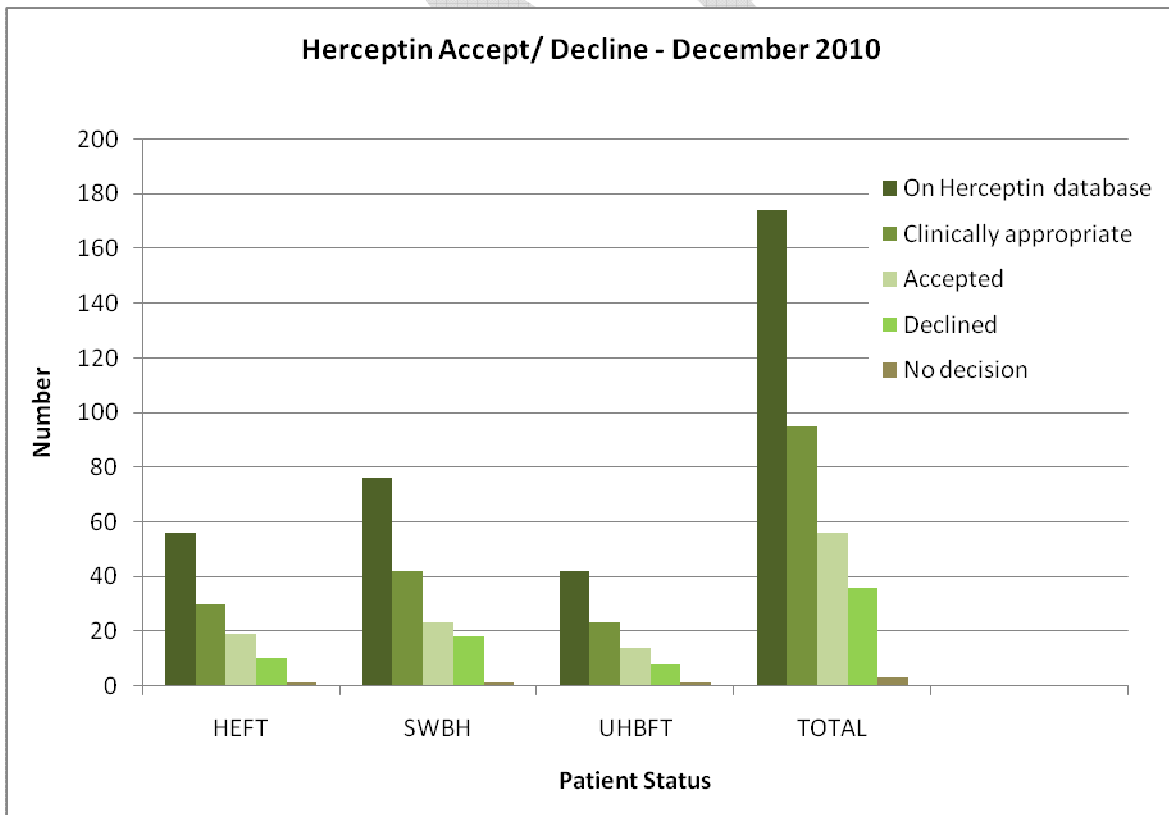

55% of patients deemed clinically appropriate for Herceptin at Home across the Trusts through December (52% in November)

Patients who are still on chemotherapy are excluded from the acceptance total as they are not currently clinically appropriate for treatment. Those who are not on chemotherapy who have accepted are classed as 'due' and included in the accepted total.

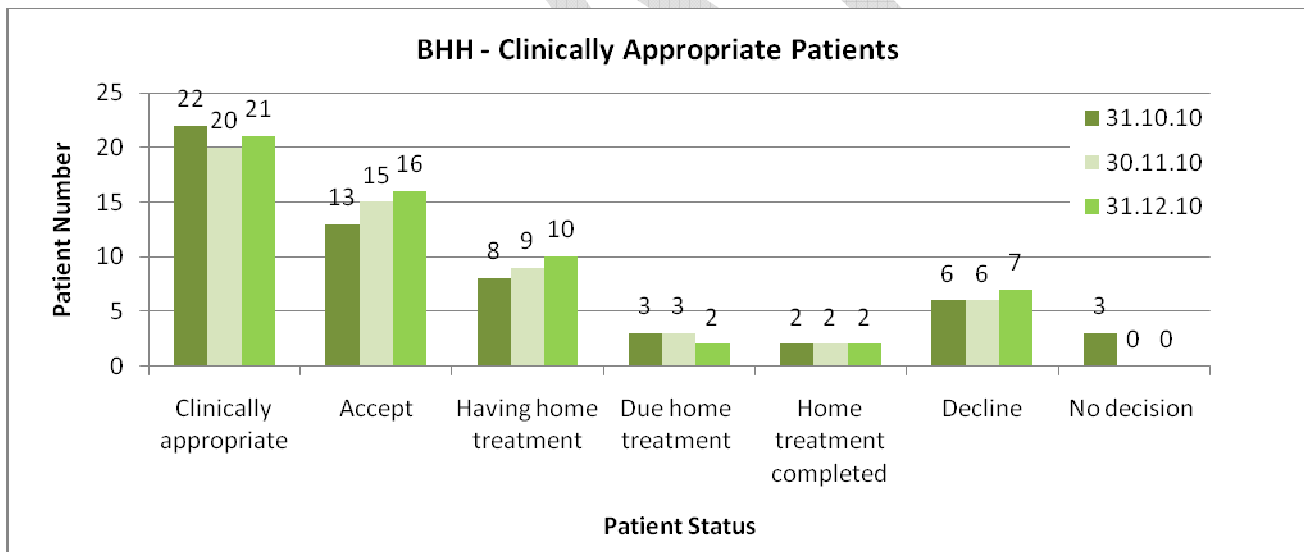

*Excludes 6 patients at HEFT currently clinically inappropriate (on chemo) who have accepted the option of home treatment once their chemo has ended. These patients will be joining the service from January 2011 onwards.
